**TO WHOM IT MAY CONCERN**

This is to certify that on 8 March 2019 at the request of Mr Ian Locke, Wirruna Poll Herefords, "Spring Valley", Holbrook, NSW, I examined the cattle identified (in the attached list Appendix I) and found the following:

EXAMINATION:

On examination, I found the cattle to be free of any signs of clinical disease or abnormalities. There was no evidence of infectious disease including IBR, BRD or other viral or bacterial infections causing respiratory disease. There was no evidence of lameness, structural abnormalities or skin disorders in the cattle examined. The cattle have been tested negative to Pestivirus antigen using a Pestivirus PACE test to ensure they are not Persistently Infected with Pestivirus (BVDV). Wirruna Poll Herefords have implemented best standards in their herd health vaccination programs for both females and bulls in the herd. Females receive annual vaccination for Leptospirosis and Clostridial disease using Ultravac 7 in 1 vaccine. Bulls receive vaccinations for Vibriosis and Pestivirus in addition to Ultravac 7 in 1 vaccine for Leptospirosis and Clostridial disease. Calves receive Piliguard vaccine to aid in Pinkeye prevention. The cattle examined were in excellent body condition and general health.

IDENTIFICATION:

**SEE ATTACHED APPENDIX I**

Yours faithfully,
